

Elbows

FLX-VBH/FLX-VBW

Description

FLX-VBH/FLX-VBW oval, plastic elbows use nipple connection with HPDE oval ducts, diameter 132-52 mm. FLX-VBH horizontal elbow features a 90 degree angle and allows to build complex installations with bends which might have been impossible when using only flexible ducts. FLX-VBW version allows to make a quick upwards turn with the installed ducts – it is necessary, e.g. when installing pipes on the floor and afterwards along the wall.
